DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-31, drawn to apparatus and method to generate a displayable terrain model, classified in class 434, subclass 139.
- II. Claims 32-39, drawn to simulation mission profiles, classified in class 434, subclass 43.
- III. Claims 40-48, drawn to terrain source data collection apparatus and method, classified in class 707, subclass 102.
- IV. Claims 49-54, drawn to terrain engine and method for compiling source data to build a terrain model, classified in class 345, subclass 474.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as the generation of terrain models for use with moving vehicles. This invention is not restricted to use by a flight simulator but may be used to generate terrain models for land and sea based vehicles as well.

Also in the instant case, invention II has separate utility such as the generation of simulation mission profiles for a plurality of transportation means.

Art Unit: 3714

Also in the instant case, invention III has separate utility such as the collection of terrain source data for use in studying the terrain data for topology research as well as that of transportation means.

Also in the instant case, invention IV has separate utility such as the compilation of terrain source data to build a terrain model for use in mapping and meteorological research as well as transportation needs. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Guy Gosnell on February 7, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

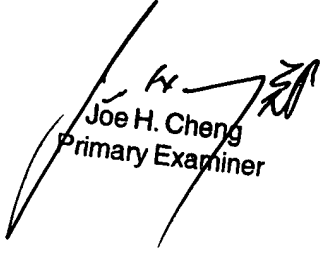

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John L Sotomayor whose telephone number is 703-305-4558. The examiner can normally be reached on 6:30-4:00 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Hughes can be reached on 703-308-1806.
